On 25 February 2009 a Boeing 737-800, flight TK1951, operated by Turkish Airlines was flying from Istanbul in Turkey to Amsterdam Schiphol Airport. There were 135 people on board. During the approach to the runway at Schiphol airport, the aircraft crashed about 1.5 kilometres from the threshold of the runway. This accident cost the lives of four crew members, and five passengers, 120 people sustained injuries. The crash was caused by a malfunctioning radio altimeter and a failure to implement the stall recovery procedure correctly.

The aircraft dispatcher is critical to air travel safety and a viable career option for many aviators. With this book, prepare for the FAA oral and practical exam to earn the Aircraft Dispatcher certificate.

This Dictionary covers information and communication technology (ICT), including hardware and software; information networks, including the Internet and the World Wide Web; automatic control; and ICT-related computer-aided fields. The Dictionary also lists abbreviated names of relevant organizations, conferences, symposia and workshops. This reference is important for all practitioners and users in the areas mentioned above, and those who consult or write technical material. This Second Edition contains 10,000 new entries, for a total of 33,000.

This unique resource covers aircraft maintenance program development and operations from a managerial as well as technical perspective. Readers will learn how to save money by minimizing aircraft downtime and slashing maintenance and repair costs. * Plan and control maintenance * Coordinate activities of the various work centers * Establish an initial maintenance program * Develop a systems concept of maintenance * Identify and monitor maintenance problems and trends

A longtime professor at the Naval War College who once directed strategic and long-range planning for the Navy and Marine Corps in Europe considers the transformation of the U.S. Navy from a defensive-minded coastal defense force into an offensive risk-taking navy in the very early stages of World War II. Noting that none of the navy's most significant World War II leaders were commissioned before the Spanish-American War and none participated in any important offensive operations in World War I, Douglas Smith examines the premise that education, rather than experience in battle, accounts for that transformation. In this book, Smith evaluates his premise by focusing on the five carrier battles of the second world war to determine the extent to which the inter-war education of the major operational commanders translated into their decision processes, and the extent to which their interaction during their educational experiences transformed them from risk-adverse to risk-accepting in their operational concepts. His book will interest students of the Pacific War, naval aviation, education, and leadership.

These proceedings summarize the best papers in each research area represented at the 2015 Annual Meeting of the German Gesellschaft für Arbeitswissenschaft, held at Karlsruhe Institute of Technology (KIT) from February 26-28. The meeting featured more than 160 presentations and 30 posters reflecting the diversity of subject matter in the field of human and industrial engineering.

This book offers a multidisciplinary strategy for finding new and more effective human-computer interaction approaches, in particular from a socio-technical perspective, that facilitate the exploration and exploitation of benefits that information technologies (IT) offer organizations. Though the relationship between IT and organizations is certainly very strong, it is also one of the greatest obstacles to securing benefits from their interaction. The participation of organizational users in the planning and design stages of IT interfaces is the main area of human-computer interaction, where a wealth of contributions are positively enriching both the academic and management discussions. Thus, a new approach for managing this relationship is needed, one in which the different stakeholders are suitably taken into account. Moreover, the outstanding success of the 2.0 phenomenon offers an example of a relevant platform where human-computer interaction has been widely developed and exploited. Consequently, this will influence and already is influencing – the way IT and users interact with each other. The book is based on a selection of the best papers – original, double blind peer-reviewed contributions – from the annual conference of the Italian chapter of the AIS, held in Milan, Italy in December 2013.
