Water won't come into the dishwasher. The anti flood system could have been triggered due to a water leak or spill at the bottom of the washer, This device (polysireene float and micro switch) when triggered shuts off the inlet water and puts the washer in pump out mode only. Use a torch and check if a small amout of water is causing the float to trigger the microswitch attached to the float.

If it's damaged or broken, you'll start seeing water leaking out. If broken, it should be replaced. Refer to your model number and user manual to ensure this part is right for you. When making this repair, open the dishwasher door and take out the lower dish tray for better access. Pull out the old gasket, and clean the channel with a rag.
