The SAE steel grades system is a standard alloy numbering system (SAE J1086 - Numbering Metals and Alloys) for steel grades maintained by SAE International.. In the 1930s and 1940s, the American Iron and Steel Institute (AISI) and SAE were both involved in efforts to standardize such a numbering system for steels. These efforts were similar and overlapped significantly.

~~SAE steel grades - Wikipedia~~

Numerical systems can be as simple as numbering and filing from the lowest number to the highest. Files may be numbered from 1 to 1000 and major sections may occur at regular intervals (100, 200, 300). Sub -sections within a file may be introduced by the addition of a decimal point: 100.1, 235.64 etc. Advantages:

To establish an identification system for the herd, first select a numbering system. Either system one or two should prove more than adequate for most cattle operations in the state. The next step is to select two marking systems to use on the herd. Two methods of marking cattle should always be used.

## ~~Beef Cattle Identification – FSA9603~~

The U.S. Navy instituted its modern hull classification system

# Where To Download Identification And Classification Numbering System Essential

on 17 July 1920, doing away with section patrol numbers, "identification numbers", and the other numbering systems described above. In the new system, all hull classification symbols are at least two letters; for basic types the symbol is the first letter of the type name, doubled, except for aircraft carriers.

## ~~Hull classification symbol - Wikipedia~~

The four divisions are typically color-coded with red on top indicating flammability, blue on the left indicating level of health hazard, yellow on the right for chemical reactivity, and white containing codes for special hazards. Each of health, flammability and reactivity is rated on a scale from 0 (no hazard) to 4 (severe hazard).
