'Zimbardo has put his finger on a great challenge of the modern era' - The Sunday Times
Masculinity is in meltdown. Young men are failing as never before — academically, socially and sexually. But why? And what needs to be done? Internationally-acclaimed psychologist Philip Zimbardo, and research partner Nikita Coulombe, show how symptoms include excessive gaming and porn use, apathy and drug abuse. They argue that digital technologies create alternative worlds that many boys find less demanding and more rewarding than real life, yet which are ultimately harmful. There is hope. *Man Disconnected* reveals where the solutions are to be found, and what action we can take. Controversial, provocative and insightful, this book is an alarm call ignored at our peril.

Offering guidance on the opportunities and threats for future generations, and featuring interviews with business leaders, this book provides a constructive look at change. It directs the youth to become job creators, not job seekers, and to approach the corporate and political worlds with an entrepreneurial mind-set.

"Organized into three parts, the ninth edition traces the impact that societal changes and emerging technologies are having as force enablers, game changers, or disrupters of American defense policy"--

This report takes a broad view of the link between work and human development. Work is a critical tool for economic growth and security, poverty reduction and gender equality. It enables full

participation in society while affording people a sense of dignity and worth. Humans working together not only increase their material well-being, they also accumulate a wide body of knowledge that serves as the basis for cultures and civilizations. The report finds that work enhances human development when policies are taken to expand productive, remunerative and satisfying work opportunities. Workers' skills and potentials are enhanced, their well-being in terms of rights, safety and benefits are ensured with targeted interventions, and an agenda incorporating decent work, a new Social Contract and a Global Deal is pursued.

The Schenley Experiment is the story of Pittsburgh's first public high school, a social incubator in a largely segregated city that was highly—even improbably—successful throughout its 156-year existence. Established in 1855 as Central High School and reorganized in 1916, Schenley High School was a model of innovative public education and an ongoing experiment in diversity. Its graduates include Andy Warhol, actor Bill Nunn, and jazz virtuoso Earl Hines, and its prestigious academic program (and pensions) lured such teachers as future Pulitzer Prize winner Willa Cather. The subject of investment as well as destructive neglect, the school reflects the history of the city of Pittsburgh and provides a

study in both the best and worst of urban public education practices there and across the Rust Belt. Integrated decades before *Brown v. Board of Education*, Schenley succumbed to default segregation during the “white flight” of the 1970s; it rose again to prominence in the late 1980s, when parents camped out in six-day-long lines to enroll their children in visionary superintendent Richard C. Wallace’s reinvigorated school. Although the historic triangular building was a cornerstone of its North Oakland neighborhood and a showpiece for the city of Pittsburgh, officials closed the school in 2008, citing over \$50 million in necessary renovations—a controversial event that captured national attention. Schenley alumnus Jake Oresick tells this story through interviews, historical documents, and hundreds of first-person accounts drawn from a community indelibly tied to the school. A memorable, important

work of local and educational history, his book is a case study of desegregation, magnet education, and the changing nature and legacies of America's oldest public schools.

The perceived shortage of cybersecurity professionals working on national security may endanger the nation's networks and be a disadvantage in cyberspace conflict. RAND examined the cybersecurity labor market, especially in regard to national defense. Analysis suggests market forces and government programs will draw more workers into the profession in time, and steps taken today would not bear fruit for another five to ten years.
