Relative Value Rfv

Rfv Vs

$$\text{RFV} = (63.97 \times 3) / 1.29 = 149 \text{ Relative}$$

Feed Value reflects both digestibility (from % ADF) and intake potential (from % NDF) of alfalfa.

Limitations of the RFV method include:

1. DDM and DMI are assumed constants for all forages.
2. ADF

# Bookmark File

## PDF Relative

and NDF are the only laboratory values used in the calculation. 3. Crude protein concentration of forage is not used. 4.

Understanding Relative Feed Value (RFV) and Relative ...  
RFV is intended to reflect how well an animal will eat and

# Bookmark File
