Research Paper On Death Penalty Death penalty is also known as capital punishment or execution. Societies from all over the world have used this sentence at one point in history, in order to avenge criminals.

Powerful, wry essays offering modern takes on a primitive practice, from one of our most widely read death penalty abolitionists As Ruth Bader Ginsburg has noted, people who are well represented at trial rarely get the death penalty. But as Marc Bookman shows in a dozen

brilliant essays, the problems with capital punishment run far deeper than just bad representation. Exploring prosecutorial misconduct, racist judges and jurors, drunken lawyering, and executing the innocent and the mentally ill, these essays demonstrate that precious few people on trial for their lives get the fair trial the Constitution demands. Today, death penalty cases continue to capture the hearts, minds, and eblasts of progressives of all stripes—including the rich and famous (see Kim Kardashian’s advocacy)—but few people with firsthand knowledge of America’s “injustice system” have the literary chops to bring death penalty stories to life. Enter Marc Bookman. With a voice that is both literary and journalistic, the veteran capital defense lawyer and seven-time Best American Essays “notable” author exposes the dark absurdities and fatal inanities that undermine the logic of the death penalty wherever it still exists. In essays that cover seemingly “ordinary” capital cases over the last thirty years, Bookman shows how violent crime brings out our worst human instincts—revenge, fear, retribution, and prejudice. Combining these emotions with the criminal legal system’s weaknesses—purposely ineffective, arbitrary, or widely infected with racism and misogyny—is a recipe for injustice. Bookman has been charming and educating readers in the pages of *The Atlantic*, *Mother Jones*, and *Slate* for years. His wit and wisdom are now collected and preserved in *A Descending Spiral*.

What happens to consciousness during the act of dying? The most compelling answers come from people who almost die and later recall events that occurred while lifesaving resuscitation, emergency care, or surgery was performed. These events are now called near-death experiences (NDEs). As medical and surgical skills improve, innovative procedures can bring back patients who have traveled farther on the path to death than at any other time in history. Physicians and healthcare professionals must learn how to appropriately treat patients who report an NDE. It is estimated that more than 10 million people in the United States have experienced an NDE. Hagan and the contributors to this volume engage in evidence-based research on near-death experiences and include physicians who themselves have undergone a near-death experience. This book establishes a new paradigm for NDEs.

Annotation In the US, murderers, particularly those sentenced to death, are usually considered as entirely different from the rest of us. Sociologist Susan F. Sharp challenges perspective by reminding us that those facing a death sentence, in addition to being murderers, are brothers or sisters, mothers or fathers, daughters or sons.

Many studies during the past few decades have sought to determine whether the death penalty has any deterrent effect on homicide rates. Researchers have reached widely varying, even contradictory, conclusions. Some studies have concluded that the threat of capital punishment deters murders, saving large numbers of lives; other studies have concluded that executions actually increase homicides; still others, that executions have no effect on murder rates. Commentary among researchers, advocates, and policymakers on the scientific validity of the findings has sometimes been acrimonious. Against this backdrop, the National Research Council report *Deterrence and the Death Penalty* assesses whether the available evidence provides a scientific basis for answering questions of if and how the death penalty affects homicide rates. This new report from the Committee on Law and Justice concludes that research to date on the effect of capital punishment on homicide rates is not useful in determining whether the death penalty increases, decreases, or has no effect on these rates. The key question is whether capital punishment is less or more effective as a deterrent than alternative punishments, such as a life sentence without the possibility of parole. Yet none of the research that has been done accounted for the possible effect of noncapital punishments on homicide rates. The report recommends new avenues of research that may provide broader

insight into any deterrent effects from both capital and noncapital punishments.

The author compares near-death experiences from all over the world, revealing their similarities as well as their differences.

Estimation of the Time Since Death remains the foremost authoritative book on scientifically calculating the estimated time of death postmortem. Building on the success of previous editions which covered the early postmortem period, this new edition also covers the later postmortem period including putrefactive changes, entomology, and postmortem r

The Nutshell Studies of Unexplained Death offers readers an extraordinary glimpse into the mind of a master criminal investigator. Frances Glessner Lee, a wealthy grandmother, founded the Department of Legal Medicine at Harvard in 1936 and was later appointed captain in the New Hampshire police. In the 1940s and 1950s she built dollhouse crime scenes based on real cases in order to train detectives to assess visual evidence. Still used in forensic training today, the eighteen Nutshell dioramas, on a scale of 1:12, display an astounding level of detail: pencils write, window shades move, whistles blow, and clues to the crimes are revealed to those who study the scenes carefully. Corinne May Botz's lush color photographs lure viewers into every crevice of Frances Lee's models and breathe life into these deadly miniatures, which present the dark side of domestic life, unveiling tales of prostitution, alcoholism, and adultery. The accompanying line drawings, specially prepared for this volume, highlight the noteworthy forensic evidence in each case. Botz's introductory essay, which draws on archival research and interviews with Lee's family and police colleagues, presents a captivating portrait of Lee.

Significant changes have taken place in the policy landscape surrounding cannabis legalization, production, and use. During the past 20 years, 25 states and the District of Columbia have legalized cannabis and/or cannabidiol (a component of cannabis) for medical conditions or retail sales at the state level and 4 states have legalized both the medical and recreational use of cannabis. These landmark changes in policy have impacted cannabis use patterns and perceived levels of risk. However, despite this changing landscape, evidence regarding the short- and long-term health effects of cannabis use remains elusive. While a myriad of studies have examined cannabis use in all its various forms, often these research conclusions are not appropriately synthesized, translated for, or communicated to policy makers, health care providers, state health officials, or other stakeholders who have been charged with influencing and enacting policies, procedures, and laws related to cannabis use. Unlike other controlled substances such as alcohol or tobacco, no accepted standards for safe use or appropriate dose are available to help guide individuals as they make choices regarding the issues of if, when, where, and how to use cannabis safely and, in regard to therapeutic uses, effectively. Shifting public sentiment, conflicting and impeded scientific research, and legislative battles have fueled the debate about what, if any, harms or benefits can be attributed to the use of cannabis or its derivatives, and this lack of aggregated knowledge has broad public health implications. The Health Effects of Cannabis and Cannabinoids provides a comprehensive review of scientific evidence related to the health effects and potential therapeutic benefits of cannabis. This report provides a research agendaâoutlining gaps in current knowledge and opportunities for providing additional insight into these issuesâthat summarizes and prioritizes pressing research needs.

There are no atheists in foxholes; or so we hear. The thought that the fear of death motivates religious belief has been around since the earliest speculations about the origins of religion. There are hints of this idea in the ancient world, but the theory achieves prominence in the

## Download Free Research Papers On The Death Penalty

works of Enlightenment critics and Victorian theorists of religion, and has been further developed by contemporary cognitive scientists. Why do people believe in gods? Because they fear death. Yet despite the abiding appeal of this simple hypothesis, there has not been a systematic attempt to evaluate its central claims and the assumptions underlying them. Do human beings fear death? If so, who fears death more, religious or nonreligious people? Do reminders of our mortality really motivate religious belief? Do religious beliefs actually provide comfort against the inevitability of death? In *Death Anxiety and Religious Belief*, Jonathan Jong and Jamin Halberstadt begin to answer these questions, drawing on the extensive literature on the psychology of death anxiety and religious belief, from childhood to the point of death, as well as their own experimental research on conscious and unconscious fear and faith. In the course of their investigations, they consider the history of ideas about religion's origins, challenges of psychological measurement, and the very nature of emotion and belief.

Ever wondered why babies suck their fingers, or why human have chins? Want to know how bad TV shows cause dementia, or find out why women groan during sex? Or are you curious about how the moon causes gout attacks, and how shaving increases the risk of cancer? Or would you just like to know the date you will die? Look no further than *Medical Hypotheses*. Over the years, hundreds of scientists, academics, doctors, and independent researchers, have come up with new answers, explanations and theories for almost everything, from AIDS and arthritis to vomiting and zinc. There are new theories to explain the Turin shroud, why religious revelations have always occurred on mountains, and why Queen Elizabeth I never married. If you re curious about health, science, and the world around and above you, read this book. Author Bio: Roger Dobson is an award-winning freelance journalist who contributes to a number of UK newspapers on health and Science, including the Daily Mail, The Times and the Sunday Times, and the Independent and Independent on Sunday, as well as the British Medical Journal. He and his family live in South Wales. 22 C,
