Equivalent equations are equations that have identical solutions. Thus,  $3x + 3 = x + 13$ ,  $3x = x + 10$ ,  $2x = 10$ , and  $x = 5$ . are equivalent equations, because 5 is the only solution of each of them. Notice in the equation  $3x + 3 = x + 13$ , the solution 5 is not evident by inspection but in the equation  $x = 5$ , the solution 5 is evident by inspection.

An equation may be solved either numerically or symbolically. Solving an equation numerically means that only numbers are admitted as solutions. Solving an equation symbolically means that expressions can be used for representing the solutions.. For example, the equation  $x + y = 2x - 1$  is solved for the unknown x by the expression  $x = y + 1$ , because substituting  $y + 1$  for x in the equation ...
